

AUDCO BUTTERFLY VALVES

Experience In Motion

FLOWSERVE INDIA CONTROLS PVT LTD

AUDCO Butterfly Valve is a Wafer type Valve with an integrally moulded elastomer body liner. Designed to outperform loose liners, AUDCO Butterfly Valve elastomer liner is moulded directly in the body bore and vulcanised in-situ, making it last the entire life of the valve. The result - a valve that requires no form of maintenance. A perfect FIT AND FORGET valve.

AUDCO Butterfly Valve is available in different combinations of body, liner and disc materials to suit a wide range of line fluids, a size range of 50 to 600 mm, and a pressure rating up to PN 20. This permits its use in a wide range of applications making AUDCO Butterfly Valve a truly versatile valve.

ADVANTAGES OF INTEGRALLY MOULDED LINER

LONGER VALVE LIFE

Integral moulding permits maximising the use of plasticiser in elastomer formulation. This ensures a smooth surface, thereby reducing friction between the disc and liner. In-situ vulcanisation imparts greater strength to the liner. Reduced friction and high strength of the seat extend valve life.

SUPERIOR SEATING

AUDCO Butterfly Valve integrally moulded body liner is not subjected to stretching, which is the cause for fatigue in loose-lined elastomers. Fatigue in elastomer results in excessive wear and subsequent tearing of the liner. A torn liner can be easily swept into the line causing extensive damage to expensive down-stream equipment. Though in valves with loose liners the seat can be replaced, by the time it is done the line fluid would have caused some corrosion to the valve body. This causes imperfect seating of the new liner, resulting in leakages. These drawbacks are eliminated in AUDCO Butterfly Valve integrally moulded liner design.

SHAFT SEALING

In AUDCO Butterfly Valve the body liner incorporates flats at the top and the bottom where the shaft passes through, providing a wide sealing area. The secondary sealing is by two 'O' rings that are moulded at the top and bottom of the seat, which get compressed around the shaft. A weatherseal at the top of the shaft prevents any ingress of foreign material into the valve.

EASY INSTALLATION

AUDCO Butterfly Valve has a gasket integral to the body which eliminates the need for a separate gasket between the valve face and companion flange. In addition, as the liner is bonded to the body, it will not hang out or get pinched during installation. Damage to expensive replaceable seats is thereby eliminated.

FULLY ISOLATED VALVE INTERNALS

In the AUDCO Butterfly Valve, the rubber liner incorporates flats at the top and the bottom where the shaft passes through, providing a wide sealing area. This ensures the line fluid does not enter the stem area and get contaminated. The secondary sealing is by two 'O' rings that are moulded at the top and bottom of the seat, which get compressed around the shaft.

FOR CORROSIVE APPLICATIONS

AUDCO CHEMSEAL is a wafer type butterfly valve specifically designed for corrosive services. The body liner is formulated from Hypalon which is a synthetic elastomer having a chemical inertness very close to that of PTFE, but at the same time having the resilience of rubber. This design eliminates contact of the valve body and shaft from the line media. These valves find application on lines carrying aqueous acids, alkali solutions and majority of inorganic salts. The valve has a coating of epoxy paint capable of withstanding corrosive atmospheres.

HYGIENIC APPLICATIONS

AUDCO CLEANSEAL is a wafer type butterfly valve specifically designed for hygienic services. The body seat is formulated from food grade EPDM or white Acrylo nitrile rubber, both synthetic elastomers which do not impart any toxic substance, colour, odour or flavour to the line media. This design eliminates contact of the valve body and shaft from the line media. These valves find application on Hygienic lines in food, dairy, beverages, pharmaceutical and other related industries. The valve has a white epoxy paint for providing corrosion resistance. These valves are available in a size range of 50 to 300 mm and maximum pressure rating of 16 bar for EPDM and 14 bar for White Nitrile.

SELF DRAINING AND CAVITY FREE

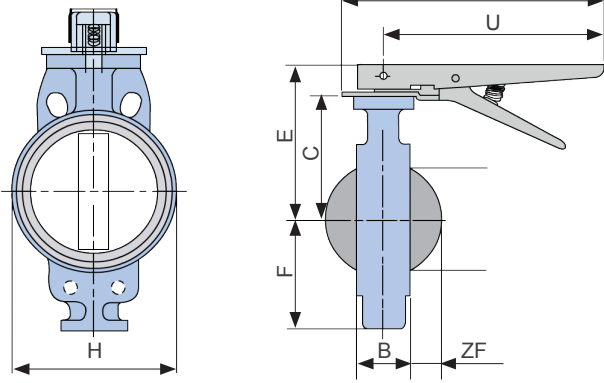

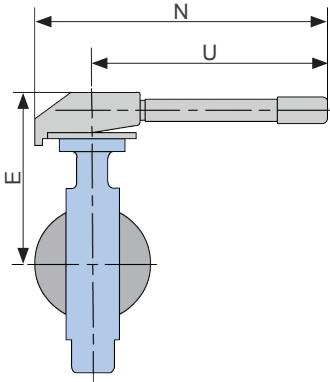

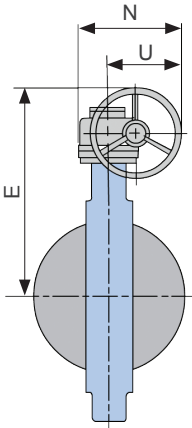

The CLEANSEAL valve design incorporates a crevice free construction, which is a pre-requisite for valves to be used on hygienic services. A smoothly streamlined elastomer lining with a fully polished stainless steel disc ensures that there are no dead pockets or crevices in the valve. The body seat and disc of the CLEANSEAL are contoured in such a way that it is impossible for any line media to remain stagnant inside the valve. The wiping action of the disc ensures that the seat is always maintained clean.

AUDCO SLIMSEAL PN10

AUDCO Slimseal PN10 Butterfly valve is a wafer type valve, with an integrally moulded elastomer body liner, is designed to outperform valves with loose liners. The elastomer liner, moulded directly in the body and vulcanized in-situ, ensures that the liner lasts the entire life of the valve. A valve that requires no form of maintenance.

AUDCO SLIMSEAL PN10 offers a cost effective solution to HVAC systems and is available in sizes from 50 mm to 300 mm, for use in water and air services.

* For Butterfly Valve with rubber encapsulated discs only

Torque figures indicated are the maximum torque under static condition and do not include any safety factor. During operator I actuator selection suitable factor of safety is to be considered taking into account fluid parameters. Torque figures are at the top shaft of the valve.

STANDARDS

Valve Design	EN 593	- Specification for Butterfly valves
	API609	- Lug and Wafer type Butterfly Valve
Installed	MSS SP67	- Butterfly valves
	ISO 5752	- Metal valves for use in flanged pipe systems. Face to face and centre to face dimensions
Face to Face dimension	50mm to 300mm	BS EN 593 - Wafer Short API 609 - Category A MSS SP-67 - Narrow Body ISO 5752 - Short
	350mm to 600mm	BS EN 593 - Wafer Medium API 609 - Category A (Except DN 350) MSS SP-67 - Wide Body ISO 5752 - Medium
Pressure testing	EN 12266-1	

The valves have been designed to fit without gaskets between flanges drilled to BS 10 Tables D & E, ASME B16.1/ B16.5 Class 150, DIN ND 10/16, EN1092 - PN10/16, IS 6418 Tables 6 to 9 or IS 6392 Tables 10 to 20.

For mounting with any other flanges contact Flowserve India Controls Pvt Ltd. Lugged valves are provided with tapped holes as per ASME B16.1 Class 125 (UNC) unless otherwise specified.

Body top platform drilled to ISO 5211 to facilitate direct mounting of actuators and gear units. Contact Flowserve India Controls Pvt Ltd. for shaft top end details for bare shaft valves.

TEST PRESSURE - bar

Valve	Working Pressure	Test Pressures	
		Body	Seat
Slimseal PN10	10	15	11
Slimseal PN16	16	24	17.6
Slimseal PN20	20	30	22
Chemseal	12	18	13.2
Cleanseal	14	21	15.4

OPERATION

Valve are offered with a choice of operators like Flow control lever, Standard Gear Unit or Heavy Duty Unit as given below:

Operator Type	PN10	PN16	PN20	Chemseal	Cleanseal
Flow Control Lever	50 to 300	50 to 300	50 to 150	50 to 300	50 to 300
Standard Gear Unit	50 to 300	50 to 350	50 to 350	50 to 300	50 to 300
Heavy Duty Gear Unit	-	200 to 600	200 to 600	-	200 to 600

Valve size - mm

Heavy duty gear units are supplied for valves to be fitted with electric actuators.

ACCESSORIES

AUDCO Butterfly valves can be supplied with factory fitted pneumatic, hydraulic or electric actuators along with other accessories such as limit switches, manual overrides, positioners etc., to form a complete flow control package.

MATERIALS AND APPLICATIONS

	General Applications	Continuous Working	Temperature Range	Maximum Working Pressure	Disc Material	Seat Material
Slimseal PN16/20	Oils, Fuels, Water, Air, Gases	Hydrocarbons (Except Aromatics) Other Liquids Dry Service	- 10°C to 90°C - 10°C to 90°C - 10°C to 65°C	16/20 bar	Nylon Coated SG Iron	Black Nitrile
	Brines, Sea Water, Estuary Water,	Liquids	- 10°C to 90°C	16/20 bar	Aluminium Bronze	
	Steam, Water, Hot Gases, Powders, Slurries and aqueous slurries of an abrasive nature	Liquids Dry Services	- 10°C to 120°C - 10°C to 100°C	16/20 bar	Stainless Steel periphery polished	EPDM
Chemseal	Alcohols, Dilute alkalis, Animal & vegetable oils		- 10°C to 90°C	12 Bar	Hypalon Encapsulated SG Iron or Stainless steel periphery polished	CSM (Hypalon)
	Dilute Acids, Weak Alkalis, Oils , hydrocarbons & Salt solutions		-10°C Upto 150°C	12 Bar	Viton Encapsulated SG Iron or Stainless steel periphery polished	FKM (Viton)
	Oils, Fuels, Hot Air		-10 Upto 140 C	6 bar	Stainless Steel periphery polished	Silicone
Cleanseal	Food, Dairy, Pharma	Liquids Dry Services	- 10°C to 80°C - 10°C to 65°C	14 bar	Stainless steel Fully polished	White nitrile
		Liquids Dry Services	- 10°C to 120°C - 10°C to 100°C	16 bar		EPDM (Tasteless)
Slimseal PN10	Sea Water, Air, HVAC systems		- 10°C to 70°C	10 bar	Nylon Coated Cast Iron	# Nitrile

SLIMSEAL PN10 nitrile
